Objective:

Motivated and detail-oriented Computer Engineering student seeking Software Development Internship where I can apply my knowledge of Java, Python, React, and Data Structures to build scalable real-world applications while gaining hands-on industry experience.

Education:

Bachelor of Technology (B.Tech) – Computer Science Engineering

Deccan Education Society Pune

Expected Graduation: 2028 Relevant

Coursework:

- Data Structures and Algorithms
- Database Management Systems
- Software Engineering
- Web Development
- Probability and Statistics

Technical Skills:

- Java
- Python

- JavaScript

Web Technologies:

- React.js
- HTML
- CSS
- Flask

Database:

- MySQL
- Neon

Tools & Platforms:

- GitHub
- VS Code
- Vercel
- Render

Concepts:

- Data Structures & Algorithms

Projects:

Ai study assistant

A simple AI-powered study assistant that helps students learn from their study materials more efficiently. Users can upload multiple PDFs, ask questions based on the uploaded documents, and get concise summaries in an easy-to-understand format.

<https://github.com/avanipandit7/ai-study-assitant>

Qless : Appointment booking app

QLess is a smart queue management and appointment system designed to eliminate physical waiting lines in high-traffic environments like hospitals and restaurants.

<https://github.com/avanipandit7/Qless-appointmentapp>

TeamBalance:

TeamBalance is a live accountability dashboard built to solve the age-old "group project" nightmare where one person does all the work. It replaces subjective finger-pointing with a data-driven Contribution Audit, using a weighted task system to visualize exactly who is carrying the load.

<https://github.com/avanipandit7/Team-Balance>

Richard Millie website :

Created a website for a luxury watch company to showcase some html ui /ux skills .

AURUM — An avant-garde luxury horology landing page engineered with a responsive frontend built entirely in raw HTML and premium custom CSS. Powered by a lightweight Python Flask backend that manages server-side route compilation and dynamic template rendering out of the box. Integrates native HTML

<https://richard-millie-three.vercel.app/>

IceBreakerBot:

App that generates fun, random conversation starters to help people connect easily. It lets users "roll the dice" to receive creative prompts for chats, events, or team sessions.

<https://github.com/avanipandit7/Ice-breaker-Bot>

Strengths:

- Full-Stack Web Development with stronger proficiency in Frontend Technologies (React, HTML, CSS, JavaScript)
- Quick learner and adaptable
- Team collaboration and communication

Skills based on AI/ML:

- Prompt Engineering
- Structured output generation
- Familiar with Retrieval-Augmented Generation (RAG) architecture for improving LLM response accuracy using external knowledge sources.
- Familiar with text embeddings for semantic similarity matching and improving contextual retrieval in LLM-powered applications.
- Designed and integrated REST APIs between React frontend and Flask backend for dynamic data-driven applications.

- Version control using GitHub with branching and collaborative workflow practices.
- Familiar with chatbot features integrated with frontend interfaces for real-time user interaction.
